

# TABLE OF CONTENTS

## CHAPTER I

<b>INTRODUCTION</b> .....	9
1.1 Signals .....	9
1.2 Some important signals used in electrical engineering.....	13
1.3 Complex signals. Phasors .....	42
1.4 Simple signal transformations .....	48
1.5 Even and odd components of a real signal .....	59
1.6 The energy and power of the signals .....	60
1.7 Notions about distributions.....	66

## CHAPTER II

<b>SYSTEMS</b> .....	71
2.1 Notions about systems .....	71
2.2 Linear systems .....	75
2.3 Time-invariant systems.....	78
2.4 Stability.....	80
2.5 Causality .....	81
2.6 Systems described by linear constant-coefficients differential equations and difference equations.....	83
2.7 Some examples of systems .....	87
2.8 Examples .....	90

## CHAPTER III

<b>CONVOLUTION</b> .....	99
3.1 Discrete-time convolution .....	99
3.2 The impulse response of discrete-time linear time-invariant systems .....	109
3.3 Finite impulse (FIR) and infinite impulse (IIR) response discrete-time systems .....	116
3.4 Implementation of discrete-time linear time-invariant (LTI) systems described by linear constant-coefficients difference equation .....	119
3.5 Continuous-time convolution .....	123
3.6 The impulse response of analog linear and time-invariant systems .....	132
3.7 Implementation of analog linear time-invariant (LTI) systems described by linear constant-coefficients differential equation .....	137

<b>CHAPTER IV</b>	
<b>SPECTRAL ANALYSIS FOR ANALOG PERIODIC SIGNALS</b> .....	143
4.1 The response of an LTI system to a complex exponential .....	143
4.2 Orthogonal transforms .....	145
4.3 Trigonometric series .....	160
4.4 Spectrum diagrams for periodic signals .....	165
4.5 Gibbs phenomenon .....	173
4.6 Exponential Fourier series for periodic Dirac distribution .....	178
4.7 Properties of exponential Fourier series .....	180
<b>CHAPTER V</b>	
<b>CONTINUOUS-TIME FOURIER TRANSFORM</b> .....	189
5.1 Spectral representation of non-periodic signals.....	189
5.2 Fourier transform for signals from the set $L^1$ .....	198
5.3 Fourier transform for signals from the set $L^2$ .....	222
5.4 Examples of Fourier transforms for signals.....	228
5.5 Fourier transform for distributions .....	238
5.6 Fourier transform for periodic signals .....	252
5.7 Effect of the truncation of the signal on its spectrum .....	256
5.8 Effect of the truncation of the spectrum on the reconstructed signal .....	259
5.9 Some remarkable spectral properties of signals .....	261
5.9.1 The Heisenberg-Gabor uncertainty principle .....	261
5.9.2 Special problems regarding signals.....	278
5.10 Frequency response of linear time-invariant (LTI) systems .....	281
5.10.1 Computation of the response of an LTI system to a periodic input signal .....	283
5.10.2 Computation of the response of an LTI system characterized by a linear constant-coefficient differential equation.....	287
5.10.3 Representation of frequency characteristics.....	292
5.10.4 First order systems .....	296
5.10.5 Second order systems .....	303
5.10.6 Other types of systems .....	313
5.11 Correlation functions .....	325
5.11.1 Correlation function. Power and energy spectral density.....	325
5.11.2 Intercorrelation function for finite power signals.....	338
5.11.3 Signals of finite average power applied to the input of linear time-invariant systems .....	341
5.11.4 Intercorrelation function for finite energy signals.....	343
5.11.5 Signals of finite energy applied to the input of linear time-invariant systems .....	349
<b>REFERENCES</b> .....	355
